Re: Wireless Frequencies & Solar Radiation in Your Area

Dear Dianne:

Thanks for the important questions on Smart Meters, Wi-Fi and solar interaction with building development as it pertains to your area. It is correct when people say we are surrounded by natural EMFs; we still have to be aware of **any** interaction with EMFs.

In regards to solar radiation and the same UV that burns skin, building development is supposed to reflect or protect from UV or the building exterior will be radiated. The radiated exterior of the building can generate heat that exceeds building code and massive energy waste is used responding to the symptoms of urban heat islands. Los Angeles as one example spends over 100 million a year in energy costs; all of it is a waste. Here is what buildings look like in the infrared spectrum which includes buildings being radiated by the sun in 3 minute increments. www.thermoguy.com/urbanheat.html

Wireless frequencies are becoming part of technology advancements; but care needs to be taken when employing wireless technologies. There are real reasons we wire devices, including protection of the public.

Although the safety standards for wireless are based on decades of scientific literature, standards admit the mechanism linking frequencies to adverse health effects wasn't known. It is very important for your area to know the mechanism linking the frequencies to adverse health effects was reported through Health Canada and Canadian Parliament's Standing Committee on Health.

Reporting the mechanism linking the frequencies changed the application of Safety Code 6 and Wi-Fi in schools, as well as smart meters, are illegal. They are causing the stimulation of tissue, heat effect and interfering with pacemakers or health monitoring equipment.

Health Canada did not report to provinces, municipalities, school districts, power utilities, or parents that the mechanism was found linking the frequencies to adverse health effects. [http://www.thermoguy.com/pdfs/Health Minister on Smart Meters Violating Safety Code 6.pdf](http://www.thermoguy.com/pdfs/Health_Minister_on_Smart_Meters_Violating_Safety_Code_6.pdf)

Your area doesn't want the liability associated with hurting people when there are alternatives. We aren't electrically compatible and effectively throwing people into the circuit is causing health problems.

Sincerely,

Curtis Bennett
