

Press Release

The founder of Thermografix Consulting Corporation, Mr. Curtis Bennett - a native of Sherwood Park, Alberta, Canada - a world expert in thermal imaging, was a featured speaker at the 14th Annual International Congress on Anti-Aging Medicine in Chicago.

Mr. Bennett is the only person in the world to build an extensive education around a technology that allows us to see temperature beyond our visible spectrum. This is the beginning of a movement and a tool for professionals, education and liberation for a world so desperately in need of answers. Continuing Medical Education (CME) credit will be offered to program participants for Bennett's session entitled, Thermographics: bringing the invisible to light. CME pertains to AMA category 1 credits or their equivalent and all practicing physicians are required to earn these credits for ongoing practice. Bennett's presentation meets the stringent requirements for the Congress, and is a breakthrough in the dissemination of knowledge concerning medical applications of thermography.

Thermografix Consulting Corporation's medical objective is to provide the medical industry, unprecedented information. Regardless of the patient's ability to communicate their symptoms, this accurate, 100% non-invasive diagnostic imaging will assist beyond expectations for quantity of information and quality of presentation available in minutes.

Bennett's appearance on a CME program sets the stage for future application of thermographic imaging in the field of Anti-Aging.

Again, congratulations Curtis, and thanks for sharing your knowledge base with us and validating our practices.
