

The Human Project present an interview with the honourable scientist Olle Johansson, the Karolinska Institute of Sweden.

"Research is to see what everyone else has seen and to think what nobody has thought."

*Albert Szent-Gyorgyi, Russian Nobel Prize winner*

**"Mobile Phone Radiation: Is it safe or not? That is the question"**

This interview is from the 21st of May 2008 and has been made to throw light on things that really matter. The interview consist of 15 parts of app. 10 minutes each. Please share with every one you care for so they can become aware too. On the next pages you find the CV of Olle Johansson. Click on video part to watch.

The Human Project is dedicated to human transformation and "b evolution". Download brainwave model, documents and find more at [www.bevolution.org](http://www.bevolution.org)

## CV for Olle Johansson, assoc. prof. at the Karolinska Institute and professor at The Royal Institute of Technology, both in **Stockholm**.

Olle Johansson introduced the clinical term "screen dermatitis" to explain the cutaneous damages that developed in the late 1970's when office workers, first mostly women, began to be placed in front of computer monitors. Many of them became ill and developed cutaneous and neurological problems. Several clinical dermatologists, headed by the late professor Sture Lidén, instead talked about union-driven fears, mass media-based psychoses, imagination phenomena, Pavlovian conditioning, and so forth. Olle Johansson, however, refused to reduce people to an ill-defined psychologic home-made diagnosis, without any support even among experts in psychology and psychiatry. Instead, he called for action along lines of occupational medicine, biophysics and biochemistry, as well as neuroscience and experimental dermatology.

He has always supported the democratic principle that citizens are allowed to be ill even in a disease, i.e. a new diagnosis, that is not yet acknowledged by the medical establishment. All diseases were once a "new diagnosis", and it should be remembered that the medical profession strongly has doubted asbestosis, cold urticaria, AIDS, the mad cow disease, skin lice, etc. He has never stopped asking questions and is constantly using the answers to put into place the ever-growing number of pieces of a very, very complicated and enigmatic puzzle.

According to Olle Johansson, persons claiming adverse cutaneous and neurological reactions after having been exposed to computer screens, cellular phones, low-energy light bulbs, etc., very well could be reacting in a highly specific way and with a completely correct avoidance reaction, especially if the provocative agent was radiation and/or chemical emissions – just as you would do if you had been exposed to e.g. sun rays, X-rays, radioactivity or chemical odours. The working hypothesis, thus, early became that they react in a cellularly correct way to the electromagnetic radiation, maybe in concert with chemical emissions such as plastic components, flame retardants, etc.

Nowadays, thanks to his endless efforts, electrohypersensitivity (EHS) is in Sweden an officially fully recognized functional impairment (i.e., it is not regarded as a disease). Survey studies show that somewhere between 230,000–290,000 Swedish men and women – out of a population of 9,000,000 – report a variety of symptoms when being in contact with electromagnetic field (EMF) sources.

The electrohypersensitive people have their own handicap organization, The Swedish Association for the Electrohypersensitive (<http://www.feb.se>; the website has an English version). This organization is included in the Swedish Disability Federation (Handikappförbundens SamarbetsOrgan; HSO). HSO is the unison voice of the Swedish disability associations towards the government, the parliament, and national authorities, and is a cooperative body that today consists of 43 national disability organizations (where The Swedish Association for the

**Olle Johansson is a human being with very honest connexion to Life. His essence is ethical and democratic. He deserves the Nobel Prize.**

Electrohypersensitive is 1 of these 43 organizations) with all together about 500,000 individual members. You can read more on <http://www.hso.se> (the site has an English short version).

Olle Johansson, associate professor, is the head of the Experimental Dermatology Unit, Department of Neuroscience, at the Karolinska Institute (famous for it's Nobel Prize in Physiology or Medicine) in Stockholm, Sweden, and he is a world-leading authority in the field of EMF radiation and health effects. He has published more than 500 original articles, reviews, book chapters and conference reports within the field of basic and applied neuroscience. He has worked with a number of international colleagues that, later on, became Nobel Laureates, including professors Andrew V. Schally and Roger Guillemin among several.

His doctoral thesis at the Karolinska Institute had the title "Peptide Neurons in the Central and Peripheral Nervous System. Light and Electron Microscopic Studies". He has participated in more than 300 congresses and symposia as an invited speaker, and with free contributions and as an invited 'observer' at an additional 100.

He is a member of, i.a., The European Neuroscience Association (ENA), The European Society for Dermatological Research (ESDR), IBAS Users of Scandinavia (IBUS), The International Brain Research Organization (IBRO), The International Society for Stereology (ISS), The New York Academy of Sciences, The Royal Microscopical Society (RMS), Scandinavian Society for Electron Microscopy (SCANDEM), The Skin Pharmacology Society (SPS), Society for Neuroscience, Svenska Fysiologföreningen, Svenska Intressegruppen för Grafisk Databehandling (SIGRAD), Svenska Läkaresällskapet, and the Svenska Sällskapet för Automatiserad Bildanalys (SSAB).

He is often used as referee for a large number of scientific journals, including the Acta Dermato-Venereologica, Acta Obstetrica & Gynecologica, Acta Physiologica Scandinavica, Acta Stereologica, Archives of Dermatological Research, Brain Research, Canadian Journal of Zoology, Diabetologia, European Journal of Dermatology, Experimental Brain Research, Experimental Dermatology, Histochemical Journal, Journal of Chemical Neuroanatomy, Journal of Comparative Neurology, Journal of Investigative Dermatology, Journal of Microscopy, Neurobiology, Neuroscience, Regulatory Peptides, and Skin Pharmacology.

He has on-going international scientific collaborations with, i.a., Japan, Brasil, India, Serbia, Germany and USA. His studies have been widely recognised in the public media, including newspapers, radio and TV as well as on the Internet, both nationally as well as internationally.

He has, besides the above-mentioned fields of interest, worked hard and in great depth in areas such as skin diseases, cancer, child delivery, female urine incontinence, oral mucosa diseases, brain and spinal cord morphology, synaptology and chemical transmission, peripheral nervous system-related issues, cardiac function, skeletal muscle function and disease, connective tissue ripening phenomena, and so forth. He is regarded as a scientist of the greatest accuracy and critical thinking, honesty and respect for the scientific principles. He has always seen himself as a civil servant employed by the citizens, thus, his work has always been aimed at supporting persons in need, rather than yielding personal career benefits, something he has had to personally pay greatly for.

-----

**"What you are aware of, you become conscious about."**  
One Law

The Human Project is reconnexion to the Now/Life. Bevolution is the inner revolution creating the outer transformation. Be aware and set yourself free. "If you wish to understand the Universe, think of energi, frequency and vibration", the genius Nikola Tesla said. This expression holds a lot of answers.

Find much more at The Human Project's website at [www.bevolution.org](http://www.bevolution.org)
