City of Toronto
Toronto, Ontario

Att: City Clerk
cc: Dianne Knight & Canadian Nuclear Safety Commission

Re: City Wide Curbside Antennas

Dear Sir/Madam,

It is critically important the City of Toronto not deploy curbside antennas for wireless use. If the city deploys the antennas, they will be electromagnetically radiating everything in the coverage areas and will create a complexity of problems.

At the same time the city is considering deploying the antennas, the Canadian Nuclear Safety Commission is meeting regarding the safety of nuclear facilities and the city would undermine objectives.

Here is a picture of the science the City of Toronto is relying on to protect their public from harm.

This is the Specific Absorption Rate test adopted by Health Canada, FCC and other governing bodies. This is the test used for cell phone manufacturers and Wi-Fi or smart meter was considered safe for 24/7 exposure because the laptop, tablets or wireless smart meter are not held against the head.

The problem with the science is the test on safety did NOT include the routers, antennas or wireless infrastructure or the required biological information associated with humans. The plastic head has salt water and a temperature probe in it. There are no organs, cells, nerves, brain, cell voltages, frequencies included, the SAR only considered whether water molecules were heating.

Safety Code 6 is the code for limits of human exposure and admits causation and biological plausibility is missing that link the frequencies to adverse health effects. Health Canada and industry report there isn't one peer reviewed study showing harm. That is because they left out the grid and the plastic head has nothing to do with biology.

As soon as you incorporate the antennas or grid, you have causality as to how people are hurt. The science is called electromagnetic induction and how we produce electricity. As soon as you incorporate the bio information associated with humans, you have biological plausibility and Safety Code 6 will change to accommodate the missing science. Last week a million

dollars was awarded to people regarding a tower, Toronto curbside antennas are the equivalent of a tower
